

KACPER WARDYNSKI

507-2419 Erlton Rd Calgary, AB
(778) 985-8735 ♦ kacper.wardynski@gmail.com
kwardynski.github.io

B.Sc. Physics graduate from UBC currently employed as a Software Developer specializing in algorithm design, optimization, and image processing. Favorite languages are Elixir, MATLAB and C++.

EDUCATION

University of British Columbia B.Sc. Physics	<i>September 2010 - November 2015</i> <i>Vancouver, BC</i>
Western Canada High School International Baccalaureate Certificate - Honors	<i>September 2007 - June 2010</i> <i>Calgary, AB</i>

EXPERIENCE

Validere <i>Software Developer - Elixir</i>	<i>August 2022 - Present</i> <i>Calgary, AB</i>
---	--

- ♦ Bolstered application security to protect from malicious file uploads and SSRF attacks.
- ♦ Implemented an abstraction layer on top of the existing data model to allow for expansion into adjacent industries.

Cold Bore Technology <i>Software Developer - Elixir</i>	<i>September 2021 - August 2022</i> <i>Calgary, AB</i>
---	---

- ♦ Responsible for the design, deployment, and maintenance of applications running event detection algorithms deployed on oil pads.
- ♦ Introduced supervision and concurrency methods to the codebase to improve the scalability and reliability of the application.
- ♦ Optimized real-time data processing and storage to reduce memory usage and increase application efficiency.

DarkVision Technologies <i>MATLAB Developer / Senior Analyst</i>	<i>January 2019 - September 2021</i> <i>Vancouver, BC</i>
--	--

- ♦ Developed an algorithm leveraging PSNR and Optical Flow principles to correlate imagery collected by the tool with on-board telemetry, which corrects for velocity-based image distortions.
- ♦ Designed a MATLAB toolbox and GUI to handle much of the post-processing performed by the Analysis team, reducing errors and allowing for parallelization of work.
- ♦ Developed a suite of image processing tools with MATLAB to allow for the visualization and processing of volumetric ultrasound data.

PROJECTS AND INTERESTS

Automotive Mechanics

Plenty of experience working on small-block Ford engines, Harley-Davidson V-Twins and the Nissan VQ platform.

Arduino + Raspberry Pi

Projects ranging from a mini digital orrery to an image-detection algorithm used to help break bad habits. See them on kwardynski.github.io.

Super Smash Bros.

Outrank 97.5% of global players with 10 characters in the roster.
