

KACPER WARDYNSKI

507-2419 Erlton Rd Calgary, AB
(778) 985-8735 ♦ kacper.wardynski@gmail.com
kwardynski.github.io

B.Sc. Physics graduate from UBC currently employed as a Software Developer specializing in algorithm design, optimization, and image processing. Favorite languages are Elixir, MATLAB and C++.

EDUCATION

University of British Columbia B.Sc. Physics	<i>September 2010 - November 2015</i> <i>Vancouver, BC</i>
Western Canada High School International Baccalaureate Certificate - Honors	<i>September 2007 - June 2010</i> <i>Calgary, AB</i>

EXPERIENCE

Cold Bore Technology <i>Software Developer</i>	<i>September 2021 - Present</i> <i>Calgary, AB</i>
♦ Responsible for Elixir and Python code running concurrent event detection algorithms deployed on oil pads.	
♦ Introduced Elixir concurrency methods into the codebase to improve efficiency and portability of applications.	

DarkVision Technologies <i>MATLAB Developer / Senior Analyst</i>	<i>January 2019 - September 2021</i> <i>Vancouver, BC</i>
♦ Developed an algorithm leveraging PSNR and Optical Flow principles to correlate imagery collected by the tool with on-board telemetry to correct for velocity-based image distortions.	
♦ Designed a MATLAB toolbox and GUI to handle much of the post-processing performed by the Analysis team, reducing errors and allowing for parallelization of work.	
♦ Developed a suite of image processing tools with MATLAB to aid in the visualization and processing of volumetric ultrasound data.	

PhotoSat <i>Satellite Data Analyst / Geomatics Specialist</i>	<i>November 2017 - December 2018</i> <i>Vancouver, BC</i>
♦ Created custom ARC tools, processes, and plug-ins using ArcPy and the ARC ModelBuilder, automating key labour intensive steps in the team's workflow.	
♦ Assisted in the development of an NDVI based algorithm to automatically detect bodies of water and regions of vegetation in multi-spectral satellite imagery.	

PROJECTS AND INTERESTS

Automotive Mechanics
Plenty of experience working on small-block Ford engines, Harley-Davidson V-Twins and the Nissan VQ platform.

Arduino + Raspberry Pi
Projects ranging from a mini digital orrery to an image-detection algorithm used to help break bad habits. See them on kwardynski.github.io.

Super Smash Bros.
Outrank 97.5% of global players with 10 characters in the roster.
