kwardynski.github.io

(778) 985-8735 ♦ kacper.wardynski@gmail.com

---

B.Sc. Physics graduate from UBC currently employed as a Software Developer specializing in algorithm design, optimization, and image processing. Favorite languages are Elixir, MATLAB and C++.

## EDUCATION

---

**University of British Columbia**

*September 2010 - November 2015*

B.Sc. Physics

*Vancouver, BC*

**Western Canada High School**

*September 2007 - June 2010*

International Baccalaureate Certificate - Honors

*Calgary, AB*

## EXPERIENCE

---

**Validere**

*August 2022 - Present*

*Software Developer*

*Calgary, AB*

- ♦ Bolstered application security by implementing an array of safety measures, ranging from virus scanning of uploaded files to SSRF attack mitigation.
- ♦ Contributed to the architecture and design of Validere's back-end services, ranging from the algorithms backing a fully configurable notification service to an authentication and authorization platform.

**Cold Bore Technology**

*September 2021 - August 2022*

*Software Developer*

*Calgary, AB*

- ♦ Responsible for the development and deployment of an application stack running complex event detection algorithms, allowing oil and gas operators real-time insight into status of all systems on a well pad.
- ♦ Developed a customizable alerting system, enabling users to be notified when any combination of conditions are satisfied across their monitored services.

**DarkVision Technologies**

*January 2019 - September 2021*

*Senior Analyst / Developer (Internal Tools)*

*Vancouver, BC*

- ♦ Developed an algorithm leveraging PSNR and Optical Flow principles to correlate imagery collected by DarkVision's ultrasound inspection tool with on-board telemetry readings to correct for velocity-based image distortions.
- ♦ Developed a system of tools to automate much of the manual work required for processing ultrasound data, resulting in a reduced error rate, shorter delivery times, and allowing for parallelization of work.

## PROJECTS AND INTERESTS

---

**Automotive Mechanics**

Plenty of experience working on small-block Ford engines, Harley-Davidson V-Twins, and the Nissan VQ platform.

**Arduino + Raspberry Pi**

Projects spanning a variety of disciplines, from an image-detection algorithm used to help break bad habits to a touch-screen treat tracker for my cat. See them on [kwardynski.github.io](https://kwardynski.github.io).

**Super Smash Bros.**

Outrank 97.5% of global players with 12 characters in the roster.
